

The Hay Baby is the ideal alternative to expensive and bulky equipment!

Why should I buy the Hay Baby?

- The Hay Baby is a non-pivoting device. This makes backing the Hay Baby into small barns a piece of cake!
- The wheel base of the Hay Baby is wider than that of any ATV or UTV, making it safer on steep grades.
- The Hay Baby is designed to carry the majority of the load placing minimal weight on the suspension of the ATV or UTV.
- The Hay Baby is operated from the drivers seat, making the process quick and easy.
- The Hay Baby is universal! It can be attached to most ATVs or UTVs 400cc and above with a ball hitch or factory receiver!
- The Hay Baby is "Turf-Friendly"! It won't make deep ruts typically caused by tractor tires.
- The Hay Baby costs less than typical machinery needed to move large bales of hay.
- The Hay Baby, attached to an ATV or UTV, is many times more fuel efficient than standard farming equipment.
- The Hay Baby is built with industrial grade parts. It very low maintenance.
- The Hay Baby can safely lift and transport round bales of hay weighing up to 1200 lbs!
- The compact size of the Hay Baby with it's quick attach and remove design makes the Hay Baby easy to store.

Do you need to move round bales of hay but find no other need for a heavy tractor?

The Hay Baby is perfect for you!

Now introducing the Hay Mama and the Hay Papa!

Do you need to move bales larger than the Hay Baby can handle? Don't fret! The Hay Mama can move bales as large as 5'x5' and the Hay Papa can move bales as large as 6'x5'!

The Hay Mama and Papa have been beefed up with heavier steel than the Hay Baby, and have been equipped with a higher rated winch and axle.

The Hay Baby was created by Lonnie Fast, of West Virginia, out of a personal need to move hay quickly and efficiently, and without creating devastating turf ruts caused by his tractor. Lonnie credits the design of the Hay Baby to Divine Inspiration and pursues it's success with charity in mind.

Lonnie Fast, president of Fast Hay Movers Inc. and creator of the Hay Baby, uses a Hay Baby attached to a standard utility ATV to haul 4'x5' bales of hay swiftly across his field in West Virginia.

The Hay Baby is assembled in the USA.
Patent No: 7,544,030
